hello! As a Designer and User Interface (UI) Developer with over 10 years of experience, specializing in Agile methodology, branding, and User Experience (UX) Design, I have a strong history of working with diverse technical teams to create scalable web and mobile solutions. I design not only interfaces, but also meaningful data visualizations that transform complex information into clear, actionable insights, enabling effective data storytelling across digital products.

I am adept at managing stakeholder expectations throughout all phases of the project lifecycle, aligning business goals with user needs, and striving for excellence in every brand, UI, and data-driven experience I develop.

Fueled by caffeine, obsessed with drumming, dreaming of a world tour on my bike. Proud mom to two royal feline dictators. Writing takes me to another universe, and Xbox? My focus could rival a laser beam!
